Solar Panels that work all year round

EHP has a proven track record in installing and sourcing quality, sustainable heating systems in Ireland. We researched the market to identify the most reliable and efficient Solar Panels for the Irish climate.

We are proud partners of LVP Renewables and Energie who have 30 years in perfecting lightweight high performance, zero maintenance solar heating systems.

A solar water heating system used across Ireland and Europe featured on RTEs About the House.

Savings of up to 80%

Energie Thermal Dynamic Solar panels have been shown to produce savings of up to 80% over conventional water heating methods (oil, immersion or solid fuel).

As they don't rely on sunshine as their sole source of energy, the system can heat your water 12 months of the year, in hail, rain, wind or shine.

Unlike some other solar panels there are no fragile glass tubes that need replacing, just unobtrusive flat panels that will produce hot water every day.

Note: Plus our panels can be retrofitted easily to enhance your current heating system.

Comparison Table

Energie Panel	Solar Tubes/Panel
South, East or West	Ideally south facing only
Does not freeze	May be prone to freezing/bursting
Normally maintenance free	Maintenance, on average, every 2 years
Works at night	Only works by day
Works 365 days a year	Mainly 6 months of the year
Lightweight panel 8kg	Can weight 30-40kg each
Stand Alone system	Requires an additional heat source
100% of your hot water	40%-50% of your hot water

Piping hot water, year round for less

While one Solar Panel will supply a family of up to 6 people with all their hot water needs, our Energie Solar Panel Systems are available in a range of sizes. So, we can easily install for domestic or commercial use such as Nursing Homes, Restaurants, Schools, B&Bs and Sports Centres.

Energie is a reliable product, with virtually no maintenance needed. Hundreds of Irish homes are already saving massively on their heating bills with Energie Thermodynamic Solar Panels.

What our customers say:

I have found this system to be much better than I expected. Supplying an unlimited amount of hot water for 5 adults and saving us a fortune on oil. Efficient Heating & Plumbing were very professional and completed the work to a very high standard. I would highly recommend them.

Paul Gillen, Greencastle.

After considering several different solar options, we decided on a new thermo-dynamic system from Efficient Heating & Plumbing. Completed in one day to a very high standard by an efficient, friendly and knowledgeable EHP team. The next day there was lots of hot water.

Mervyn and Claire Hutton, Ramelton.

Why our Solar Heating System is more efficient

- Huge reduction in costs of heating hot water
- Instant hot water all year
- Works in all weather conditions
- Stand alone no backup required
- Zero maintenance, highly durable
- No yearly servicing
- Lightweight panel only 8kg
- Easy to install and retrofit to your existing heating system
- Kind to the environment

Other Services

We Offer a wide range of plumbing and heating services for domestic and commercial use...

Solar Heating | Underfloor Heating | Heatpumps

Cast Iron Multifuel Boilers | Maintenance | Biomass Heating Systems

Water Saving Products | Water Treatment Systems
